-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This Office Action is in response to telephone interview with Mr. Sheldon on June 9, 2005. This Action replaces the Final of December 30, 2004.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyoshi-4701364 in view of Ishikawa et al-6,057,021.

Miyoshi discloses a method of cleaning a magnetic head with a tape having a stiffness of 2 or less, a cleaning portion having carbon black and ferromagnetic powder thereon, with a thickness of 2-7 micrometers and a roughness within the claimed range. As best understood, Miyoshi discloses the tape having the same elements as claimed, such as a non-magnetic layer within the cleaning layer (col. 3, lines 45-50). In addition, col. 4, lines 19-21, state that other layers can be provided between the support and cleaning layer. Miyoshi does not disclose the head having trenches. However, Ishikawa et al. teaches a magnetic head with grooves or trenches (textured surface) and polishing the surface with polishing tape (2012). Therefore, to use the magnetic head cleaning method disclosed by Miyoshi with a textured (grooved) disc, as taught by Ishikawa would have been obvious at time invention was made to one of ordinary skill in

Art Unit: 3723

the art since both processes involve a cleaning a magnetic head and the cleaning/polishing would perform equally well on both, such as one having grooves/trenches, as taught by Ishikawa, and the choice of workpiece would be within the level of ordinary skill.
